

Corporate Policy on Climate Change & Environmental Stewardship

1. STATEMENT OF PURPOSE

At Khonburi Sugar Public Company Limited (KBS), we recognize climate change as both a critical operational risk and an opportunity to lead the transformation toward a low-carbon bio-economy. Operating across the integrated sugar, sugarcane, and bioenergy value chain, KBS commits to aligning its business strategy with global climate goals and Thailand's national decarbonization roadmap.

2. CLIMATE TARGET

Horizon	TARGET
2030	Reduce Scopes 1–3 GHG emissions intensity and reach a net Carbon Neutral position, offsetting residual emissions with carbon credits. See the Corporate Climate Transition Plan (TP-ENV-2026-02) for targets and implementation detail.
2050	Achieve Net Zero GHG emissions (Scopes 1–3) across the full value chain.

KBS pursues through four areas of action:

- **Operational Decarbonization & Energy Transition:** Maximize use of renewable bagasse and biomass energy, improve industrial energy efficiency, and expand solar power generation across KBS facilities.
- **Sustainable Agriculture & Scope 3 Emissions:** Work with sugarcane farmers to eliminate field burning, adopt precision and low-emission farming practices, and build climate resilience across the agricultural supply chain.
- **Circular Economy & Carbon Offsetting:** Convert production by-products into bio-fertilizers and other value-added resources, and use verified carbon credits and renewable energy certificates to support KBS's climate goals.
- **Water & Resource Stewardship:** Pursue efficient water use, responsible wastewater management.

3. GOVERNANCE & DISCLOSURE

- **Management Oversight:** Executive Management, through the ESG Committee, oversees climate risk evaluation and monitors implementation of this policy.

- **Climate-Related Public Policy Position:** KBS supports the objectives of Thailand's national climate policy framework and does not, directly or through industry associations, lobby against science-based climate regulation. KBS periodically reviews whether its industry association memberships remain consistent with this position.
- **Verification & Reporting:** KBS commits to third-party verification of its greenhouse gas footprint and to transparent, standards-aligned public reporting.
- **Continuous Improvement:** This policy is reviewed periodically to reflect advancing climate science,
- market expectations, and regulatory developments.
